Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25, also payable through the Center. (N.B. For review journals this fee is $0.20 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. – chemical **111** (1991) 936; **112** (1991) 227, 294, 354, 402, 773, 791, 838; **113** (1991) 39, 103, 113, 221, 329, 485, 491, 681; **114** (1991) 255; **115** (1991) 154, 174, 180, 261, 299, 612, 674, 723, 728, 733; **116** (1992) 364, 369, 515; **117** (1992) 271, 549, 666; **118** (1992) 41, 109, 125, 163, 176, 218, 269; **119** (1992) 70, 98, 303;
– dry BCl_3 plasma **117** (1992) 375
– photochemical **117** (1992) 666, 1080
– thermal **114** (1991) 565; **115** (1991) 679
Eutectic growth **112** (1991) 386, 635; **113** (1991) 77, 242, 289; **114** (1991) 249, 267, 357; **118** (1992) 135, 377, 385; **119** (1992) 126, 141, 160

Fiber optics **117** (1992) 826
Finite element method **112** (1991) 699; **113** (1991) 227, 499; **114** (1991) 267, 411; **119** (1992) 261

Gadolinium
– gallium garnet **113** (1991) 575
– molybdate **116** (1992) 185
Gallium
– aluminum arsenide **111** (1991) 269; **113** (1991) 540; **115** (1991) 203, 455; **120** (1992) 25, 57, 245
– antimonide **111** (1991) 360, 550, 619, 623, 638, 651, 659, 664; **113** (1991) 557; **115** (1991) 474; **119** (1992) 8, 270;
– arsenide **111** (1991) 14, 30, 39, 43, 50, 65, 70, 83, 88, 93, 98, 115, 120, 125, 131, 136, 168, 178, 184, 189, 200, 210, 216, 233, 239, 246, 252, 260, 264, 269, 274, 280, 284, 288, 295, 300, 305, 318, 333, 339, 344, 348, 371, 393, 424, 507, 511, 515, 521, 539, 544, 550, 554, 559, 564, 570, 574, 578, 584, 683, 741, 747, 833, 978, 989, 1052, 1057, 1066, 1071, 1089, 1100, 1105; **112** (1991) 1, 14, 123, 316, 437, 474, 791, 838; **113** (1991) 103, 131, 227, 254, 265, 279, 412, 491; **114** (1991) 99, 203, 255, 337, 581, 665; **115** (1991) 52, 61, 65, 69, 74, 83, 89, 94, 99, 122, 128, 141, 145, 203, 211, 221, 226, 241, 248, 294, 318, 333, 338, 348, 353, 398, 406, 418, 423, 443, 448, 479, 519, 524, 538; **116** (1992) 48, 98, 169, 213, 240, 351, 369, 387, 461, 511, 518; **118** (1992) 117, 163, 414, 467; **119** (1992) 74, 195; **120** (1992) 25, 33, 39, 45, 50, 57, 63, 71, 78, 88, 94, 103, 114, 124, 200, 206, 218, 228, 234, 240, 245, 296, 306, 323, 362, 369, 389, 395
– arsenide antimonide **111** (1991) 628
– arsenide phosphide **111** (1991) 61; **120** (1992) 389
– arsenide silicide **115** (1991) 328
– indium antimonide **111** (1991) 683
– indium arsenide **111** (1991) 339, 413, 461, 466, 475, 599, 1062, 1084; **112** (1991) 343, 359; **115** (1991) 74, 203, 398; **116** (1992) 521; **120** (1992) 25, 33, 57, 140, 312, 338, 357
– indium arsenide antimonide **111** (1991) 413, 669; **115** (1991) 728
– indium arsenide phosphide **111** (1991) 599; **112** (1991) 27; **120** (1992) 140, 145, 157, 180, 338, 349, 376

– indium phosphide **111** (1991) 353, 564, 578; **112** (1991) 373; **115** (1991) 529
– nitride **111** (1991) 1024; **115** (1991) 381, 628, 634, 639; **120** (1992) 114
– organic **111** (1991) 115, 274, 539, 544, 550, 554, 570, 574, 578, 599; 638; **112** (1991) 1, 359, 474, 628; **113** (1991) 103, 441; **114** (1991) 3, 31, 481, 581; **115** (1991) 52, 61, 69, 83, 89, 154, 158, 211, 216, 221, 226, 236, 241, 248, 265, 353, 406, 423, 448, 460, 469, 474, 617, 807; **118** (1992) 117
– phosphide **111** (1991) 564; **114** (1991) 380; **115** (1991) 158, 261, 265, 418, 469, 538; **118** (1992) 176; **120** (1992) 389
– selenide **111** (1991) 1038; **114** (1991) 99; **115** (1991) 798
Garnets **113** (1991) 575; **118** (1992) 218, 396; **119** (1992) 297, 313
Germanium **111** (1991) 833, 847, 876, 882; **112** (1991) 7; **113** (1991) 21, 45, 186; **115** (1991) 79, 106, 112; **116** (1992) 158; **120** (1992) 284
– selenide **119** (1992) 79
– silicide **114** (1991) 573
– silicon **118** (1992) 452
Glycine **114** (1991) 389; **116** (1992) 421
Gold **112** (1991) 427
– telluride **116** (1992) 397
Grain boundary **111** (1991) 715; **112** (1991) 227, 354; **113** (1991) 465; **114** (1991) 198, 249, 467, 549, 665; **115** (1991) 774; **117** (1992) 96, 1098; **118** (1992) 14, 109, 135, 461; **119** (1992) 70, 98

Laser Ablation of Electronic Materials

Basic Mechanisms and Applications

edited by **E. Fogarassy** *and* **S. Lazare**

European Materials Research Society Monographs Volume 4

The contributions in this volume focus on the main directions that ablation has taken in recent years: basic mechanisms, diagnostics and applications to surface etching, materials synthesis and instrumentation. The materials synthesis of new compounds is expanding rapidly since the discovery of high Tc superconductors. Photoablation has developed into a very elegant technique to evaporate solids and grow thin films and multilayers in a very controlled manner. Mass and optical spectroscopies of ablated particles have led to new concepts of fast analysis of solids, which are certainly going to be widely used and further developed. New experimental as well as theoretical approaches are presented. The work will be the definitive reference source for anyone interested in the latest advances and results of current experimental research in ablation techniques and concepts.

Abbreviated contents: **An Historical Overview.** First ages of the coherent electromagnetic waves generation applied to new materials transfer processes named laser ablation *(J.-F. Eloy)*. **I. Mechanisms, Spectroscopy and Diagnostics.** Electron emission by laser irradiated surfaces *(G. Petite et al.)*. Laser-ablation: Fundamentals and recent developments *(D. Bäuerle et al.)*. Picosecond laser ablation of mono and multicomponent targets *(W. Marine et al.)*. Laser ablation dynamics of superconductors: Photoacoustic and spectroscopic studies *(P.E. Dyer et al.)*. Dynamics of laser ablation of high Tc superconductors and semiconductors and a new method for growth of films *(K. Murakami)*. Analytical tools using laser ablation *(J.F. Muller et al.)*. **II. Laser Ablation and Etching.** Ultraviolet laser interactions with polymer surfaces in the microsecond regime: The photokinetic effect *(R. Srinivasan)*. Surface modification of polymers with excimer lasers and its applications *(A. Yabe, H. Niino)*. 248 nm laser ablation of chlorinated copper and CuCl surfaces *(S. Küper et al.)*. Polishing of diamond films by light *(V.N. Tokarev et al.)*. Laser ablation and laser etching *(J. Boulmer et al.)*. Excimer laser projector for materials processing applications *(M.C. Gower, P.T. Rumsby)*. **III. Thin Film Deposition and Materials Synthesis.** Laser ablation synthesis and properties of epitaxial $YBa_2Cu_3O_{7-\sigma}$ / $PrBa2Cu_3O_{7-\sigma}$ superconducting superlattices *(D.H. Lowndes et al.)*. In-situ preparation of High Tc YBCO thin films by pulsed laser deposition *(H.-U. Habermeier)*. Laser ablation of BiSrCaCuO films *(J. Perrière)*. Growth of YBCO superconducting thin films *(D. Chambonnet et al.)*. The unique applications of pulsed laser deposition to the epitaxial growth of semiconductor films *(J.T. Cheung, H. Sankur)*. Optical, structural and mechanical properties of diamond-like carbon films deposited by laser ablation and laser-plasma ablation techniques *(A. Rengan, J. Narayan)*. Excimer laser ablation for thin film deposition *(A.A. Gorbunov, V.I. Konov)*. Pulsed laser deposition of the solid electrolyte yttria stabilized zirconia and λ-Alumina *(N. Nicoloso et al.)*.

Diamond, Diamond-like and Related Coatings

Proceedings of the 2nd European Conference, Nice, France, 2-6 Sept., 1991

edited by **P.K. Bachmann** *and* **A. Matthews**

Reprinted from Diamond and Related Materials, Vol. 1, Nos. 2-4 & 5-6

The 124 papers in this volume give a current overview on diamond and DLC coatings, plus the related materials SiC and BN. The papers provide an interesting and stimulating overview on all aspects of vapour-grown diamond and related materials. The high quality of the contributions demonstrates the still-growing interest in this exciting field of materials science.

Abbreviated contents:
Invited Papers: Epitaxial thin film growth characterization and device development in monocrystalline-α and β-silicon carbide *(R.F. Davis et al.)*. Rapid synthesis of diamond by counter-flow liquid injection into an atmospheric pressure plasma jet *(E. Pfender et al.)*. Material properties of CVD diamond produced by the DC arc-jet *(G. Lu, L.K. Bigelow)*. Growth of cubic boron nitride from vapor phase *(H. Saitoh, W.A. Yarbrough)*. Epitaxial growth of diamond thin films on foreign substrates *(T. Inuzuka et al.)*. TEM observations of diamond fi lms prepared by microwave plasma CVD *(H. Eto et al.)*. Free-standing diamond membranes: optical, morphological and mechanical properties *(H. Windischmann, G.F. Epps)*. Diamond devices made of epitaxial diamond films *(N. Fujimori, Y. Nishibayashi)*. Device quality diamond substrates *(M.W. Geis)*. Semiconducting diamonds made in the USSR *(A.E. Alexenko, B.V. Spitsyn)*. Properties of diamond with varying isotopic composition *(T.R. Anthony, W.F. Banholzer)*. Mechanical properties and structure of diamond-like carbon *(J. Robertson)*. Optical characterization of diamond *(P.K. Bachmann, D.U. Wiechert)*. The characterisation of point defects in diamond by luminescence spectroscopy *(A.T. Collins)*. Author index. Subject index.

Scope of the Journal of Crystal Growth

Experimental and theoretical contributions are invited in the following fields:
- Theory of nucleation and growth, molecular kinetics and transport phenomena, crystallization in viscous media such as polymers and glasses.
- Crystal growth of metals, minerals, semiconductors, magnetics, inorganic, organic and biological substances in bulk or as thin films.
- Apparatus, instrumentation and techniques for crystal growth, and purification methods.
- Characterization of single crystals by physical and chemical methods.

Instructions to Authors

Contributions may be written in English, French or German. They should have an abstract in English. They should be submitted in triplicate to a Member of the Editorial Board or preferably to an appropriate subject Associate Editor. The authors will receive the final answer of acceptance or rejection from the Office of the Principal Editor. The submission of a paper will be taken to imply that the author has satisfied himself that no copyright will thereby be infringed. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Rapid publication: Short manuscripts (up to five typewritten pages) which have been entitled "Letter to the Editors" by the author will be published directly, without sending proofs to the author. Letters on theory of crystal growth should be submitted to K.A. Jackson or R.F. Sekerka; all other letters through the Principal Editor or anyone of the Associate Editors close to the subject of the letter.
Short manuscripts (up to five typewritten pages and up to three figures and/or tables) which have been entitled "Priority communication" by the author will also be published directly, without sending proofs to the author. These manuscripts should be submitted to D. Elwell.

Manuscripts should be typewritten **with double spacings** and wide margins. First copies (or clear xerographic prints thereof) are needed for the printer.

Displayed formulae should be numbered and typed.
Vectors will be printed in bold-face italics (heavy, slanting type), and should be indicated by a wavy underlining in the typescript. Otherwise no symbols should be underlined. Special attention should be paid to characters which can easily be misread such as i (lower case), I (cap.), l (el), 1 (one), ' (prime), o (lower case), O (cap.), 0 (zero), u, v (lower case), ν (Greek nu), V (cap.), s, S, x, X, $\times$, p, P, ρ (Greek rho), etc. If necessary, unusual symbols should be explained in pencil in the margin.

Each table should be typed on a separate sheet, and should have a title in addition to its serial number.

Line drawings for the figures should be originals, drawn in black India ink and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general, the figures should be designed for a reduction factor of two to three. Glossy prints of these figures can be accepted only if they are of good quality (well-focused, so as to show no blurred or broken parts).

Photographs should be originals, with somewhat more contrast than is desired in the printed version. They should be unmounted unless they form part of a composite figure. Where necessary the top edge should be identified on the back. Figures are in general reduced to the width of one column – the parts that may be cropped should be marked on the back. Photographs should not be stapled to each other.

For information on colour illustrations, consult Vol. 83, p. 1.
Original ink drawings and photographs will be returned after publication of the paper.
Each figure should have a number and a caption. The captions should be collected on a separate sheet.

References to other papers should be consecutively numbered in the text: "Woods and Lang [1] have reported that ...", and listed at the end of the typescript as in the following examples:
[1] G.S. Woods and A.R. Lang, J. Crystal Growth 28 (1975) 215.
[2] J.C. Brice, The Growth of Crystals from Liquids (North-Holland, Amsterdam, 1973) ch. 3, p. 55.
[3] D.T.J. Hurle and J.B. Mullin, in: Crystal Growth, Ed. H.S. Peiser (Pergamon, Oxford, 1967) p. 27.

Footnotes should be avoided as far as possible.

Corrections in the proofs should be limited to printer's errors; due to the time-consuming and expensive work involved, any other changes in the proofs may be charged to the authors. They should, therefore, check their manuscript carefully for typographical errors and small changes. The submitted paper should be in final form.

Page charge and reprints: There will be no page charge. Reprints may be ordered from the publisher (25 reprints will be supplied free of charge). An order form will be sent to contributors together with the proofs.

Books for review should be sent to the Principal Editor.

News or announcements should be submitted through the Principal Editor; a duplicate should be sent directly to Mrs. F.Y. Verploegh Chassé, Elsevier Science Publishers, P.O. Box 103, 1000 AC Amsterdam, Netherlands.

Subscriptions and Advertising Orders

The subscription price per volume is Dfl.685.00, $343.00. The Dutch Guilder price is definitive; the currency equivalent is for your guidance only. Personal subscription rates are available upon request. For 1992, 10 volumes have been announced.

Subscriptions should be sent to the Publishers, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription agent.

Claims for missing numbers should be made within two months, following the date of publication. The Publisher expects to supply missing numbers free only when losses have been sustained in transit and when the reserve stock will permit.

Advertising orders and enquiries should be submitted to the Advertising Manager, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands.
